

## How to generate a QR Code

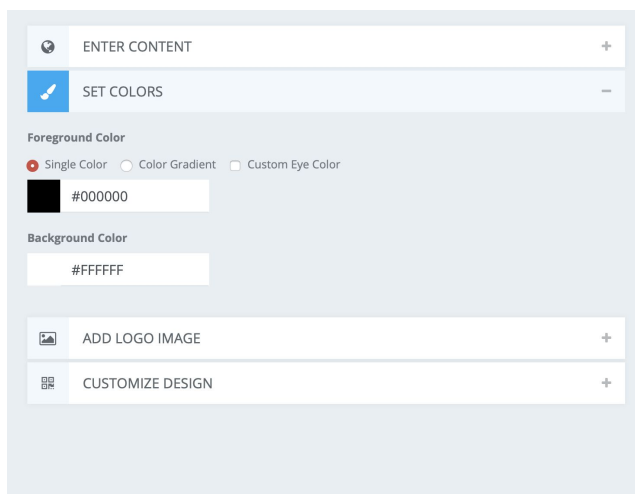

### Museum Ontario of Archeology - QR Code generator

1. Go to [QRCode Monkey - The free QR Code Generator](#)
2. In the 'Enter Content' tab section, copy and paste the url to the 3D object page in the QRcode Monkey field - 'Your URL'

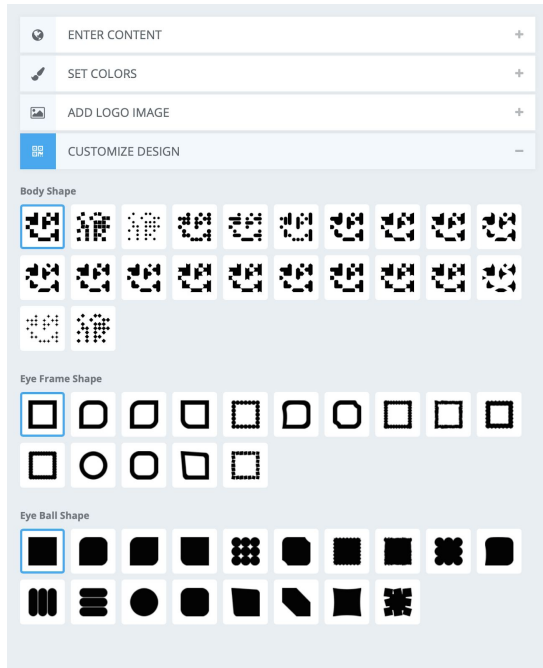

The screenshot shows the 'ENTER CONTENT' tab of the QRCode Monkey generator. It features a text input field labeled 'Your URL' with the placeholder text 'your URL here'. Below the input field are three expandable sections: 'SET COLORS', 'ADD LOGO IMAGE', and 'CUSTOMIZE DESIGN', each with a plus icon on the right.

3. In the 'Set Color' tab select the single color option then proceed to add the hex code style #000000 for black. Leave background at #ffffff (white), if desired.

The screenshot shows the 'SET COLORS' tab of the QRCode Monkey generator. It has two sections: 'Foreground Color' and 'Background Color'. In the 'Foreground Color' section, the 'Single Color' radio button is selected, and the hex code '#000000' is entered. In the 'Background Color' section, the hex code '#FFFFFF' is entered. Below these sections are the 'ADD LOGO IMAGE' and 'CUSTOMIZE DESIGN' expandable sections, each with a plus icon on the right.

4. In the 'add logo' image tab, click on the 'upload image button' and upload a high quality version of the MOA logo if desired.
5. In the customized design tab, select the eye frame shape of your preference. I used the third one from the left. Followed by selecting the final shape - 'eye ball shape'.

6. When you're happy click the 'Create QR code' to generate a preview of the new design
7. If you want the MOA logo bigger behind the QR code, create a 2.5" x 2.5" box and paste the logo within the square with a 20% opacity .
8. Note: You can select the SVG as it can be scaled up and down without losing resolution.
9. When complete proceed to print scale at 100%.
10. See sample Longhouse QR code below...
